PCSS-MOUD Implementation Performance Measures

Core Performance Measures

1. Proportion of program patients with OUD who are receiving MOUD (buprenorphine, naltrexone) (**REACH**; frequency=quarterly; #OUD dx-MOUD / #OUD Dx)
2. Proportion of prescribers who are currently prescribing buprenorphine or naltrexone (**Adoption**; frequency=twice/year; # prescribing bup or NTX / # total prescribers).
3. Proportion of patients who initiated MOUD and are retained in continuous care for at least 6 months from the start of medication (**Effectiveness**; frequency=quarterly; # retained on MOUD for 6 months / # on MOUD)

Additional Performance Measures (optional)

- Proportion of patients prescribed MOUD who start buprenorphine within 72 h of OUD diagnosis (Effectiveness; # started within 72 hrs/total # started).

Characterize the sample of patients receiving MOUD compared to the community in which the program sits (Reach; race/ethnicity, gender, sex)
